Open Energy's SolarSave Roofing Tiles

[Open Energy Corporation](#), a company focused on building integrated photovoltaics (BIPV) for the residential, commercial and industrial markets showcased a product called the SolarSave Tiles. These tiles have photovoltaic cells embedded within them that create clean energy while maintaining the natural look of your roof. The materials and electric power has a warranty of 25 years and can easily be installed by roofers without any demolition. Unlike traditional solar panels you do not need racking or structural reinforcement for the SolarSave Tiles.

The tiles are weather resistant, fire rated, and virtually require no maintenance. There are not that many solar tile products out on the market, although the SolarSave tiles claim to have the highest watts per square foot. Similar to traditional solar panels solar tiles can are scalable, since the product is modular you can grow the system by adding more SolarSave Tiles as your budget increases in the future, the product is easily expandable. The SolarSave Tiles come in black, red and brown colors.

What do you think about BIPV?
